

FDE Job Finder

Setup, API & Deploy Guide v2 — personal job portal + AI agent, every API mapped, hosted on Vercel

Your private job portal for **Forward Deployed Engineer** and **AI/ML** roles — in **every company domain** (semiconductor, embedded/robotics/automotive, IT/SaaS, fintech, health, defense, frontier labs) — across Bengaluru, India, USA and remote-open-to-India. Sources: LinkedIn, X, ~190 company career boards, job aggregators, an **AI agent** that searches Google / LinkedIn posts / X posts / company websites, a **hidden-jobs scanner** for new startups, and all 286 platforms from your *AI Job Search Master Excel*. Bring any AI (Claude, OpenAI, Gemini, Groq, OpenRouter or any third party). Only you can log in; your CV lives in a private store.

How to use this PDF: do Part A in order (≈30–40 min, all free). After Part A the app is live with 23 keyless sources already pulling jobs. Part B adds paid/quota APIs one by one — each is optional and each makes coverage better. Part C is reference: every source, every platform from the Excel, troubleshooting, costs.

Brutal truths up front

1. **LinkedIn has no public jobs API.** The app uses LinkedIn's public guest search (free, worked in testing) but LinkedIn can rate-limit Vercel's servers. Reliable LinkedIn = JSearch (free tier) or Apify (paid per result).
2. **X (Twitter) has no free read API** for new developers anymore. Official API is pay-per-use (~\$0.005 per post read); twitterapi.io is ~30× cheaper.
3. **Naukri, Wellfound, Cutshort, Hirist, Foundit, iimjobs, Shine have no public API** and block bots. Their jobs reach you through Google-Jobs aggregators (SerpApi / JSearch) plus one-click pre-filled searches in the Platforms tab.
4. **Vercel free (Hobby) cron runs only once a day.** The included GitHub Action refreshes every 30 minutes for free — that is your "real-time".
5. **No AI is truly "free and unlimited"**. Free tiers are rate-limited (Groq ≈1,000 requests/day/model, OpenRouter free 50/day, Gemini free limits shown in AI Studio). The app chains providers — when one hits its limit the next answers — which is as close to unlimited-free as it gets. Web search for the agent works the same way (Tavily 1,000/mo + Firecrawl + Exa + Linkup + Serper, or your own SearXNG = unlimited).
6. FDE hiring at frontier labs is mostly passive sourcing. This tool finds roles within ~30 min of posting; the Excel tracker + referrals is what converts them.

0. What you are deploying

Piece	What it is	Cost
Next.js app on Vercel	Tabs: Jobs · AI Agent · Hidden jobs & startups · Tracker · Excel sheets · Platforms map · Sources & APIs · AI & Keys · CV · Settings	Free (Hobby)
AI provider(s)	Any model: Gemini / Groq / OpenRouter (free tiers), Claude, OpenAI, or any third-party OpenAI/Anthropic-compatible endpoint. Used for agent filtering, reading career pages, fit checks, cover notes	\$0 (free tiers) → your choice
Web search (agent)	Tavily / Firecrawl / Exa / Linkup / Serper / Brave / Jina / SerpApi / your SearXNG — rotated so free tiers stack	\$0 (free tiers)
Upstash Redis	Stores jobs, your tracker, Excel ticks, settings, source health (gzip-compressed)	Free (500K commands, 256 MB)
Vercel Blob (Private)	Your CV files + every older version. No public URL — served only to your logged-in session	Free (1 GB)
GitHub Action	Every 30 min: refresh jobs · every 3 h: AI-agent mission · daily: hidden-jobs scan	Free
Vercel Cron	Daily backup refresh (Hobby limit)	Free
Telegram bot (optional)	Pushes new high-score jobs to your phone	Free
Job APIs	23 keyless sources built in; 7 optional keyed sources (Part B)	\$0 → ~\$15/mo (your choice)

Data flow: trigger (button / GitHub Action / Vercel Cron) → `/api/cron` → every source runs in parallel with a 90 s timeout each → jobs are filtered (**role must be FDE or AI/ML** — any company domain; excluded words removed) → tagged with domain (semiconductor, embedded, IT...) and region (Bengaluru, India, USA, remote-India-eligible) → de-duplicated across sources → scored (role + Bengaluru/India/Remote + freshness + CV match) → saved to Redis → Telegram alert for new jobs above your score threshold. One broken source never breaks the others; its error shows in **Sources & APIs**.

Tested before hand-over (4 Oct 2026): all 23 keyless sources were run live from an internet-connected sandbox — every one returned data (≈2,850 FDE + AI/ML jobs after de-duplication in one pass: 250 Bengaluru, 400 India, 1,440 USA, 740 remote; the hidden-jobs scanner found 683 hiring YC AI companies + freshly funded startups and verified their career boards in seconds, e.g. Anthropic "Applied AI Architect — Bangalore", DevRev "Forward Deployed Engineer — Bengaluru", Instahyre FDE roles, NVIDIA / Samsung Workday roles). The production build, login, tracker, Excel tracking, platform tracking, settings and CSV export were tested end-to-end. Keyed APIs (Part B) were coded against their official docs but could not be called without your keys — use the **Run now** button per source after adding a key.

PART A — Go live (free, ~30-40 min)

A1. Get the code into your GitHub repo

Repo: github.com/kashyapphassan2000-netizen/FDE-JOB-FINDER. If the code is already there (Claude pushed it), skip to A2. Otherwise unzip `fde-job-finder.zip` and run in that folder:

```
git init
git add .
git commit -m "FDE Job Finder"
git branch -M main
git remote add origin https://github.com/kashyapphassan2000-netizen/FDE-JOB-FINDER.git
git push -u origin main # add --force only if the repo has an old README you want replaced
```

Make the repo **Private** (GitHub → repo → Settings → General → Danger Zone → Change visibility) if you prefer. Nothing secret is in the code — all keys live in Vercel env vars — but private is cleaner. GitHub Actions still work on private repos (2,000 free minutes/month; this job uses ~1 min per run ≈ 1,440 min/month — inside the free quota but close. If you want margin, change the schedule to every 45 min in `.github/workflows/refresh.yml`, or keep the repo public: Actions minutes are unlimited for public repos).

A2. Import into Vercel

1. Go to **vercel.com** → log in with your account (only you have it — keep 2FA on: Account Settings → Authentication).
2. **Add New...** → **Project** → **Import Git Repository** → pick FDE-JOB-FINDER (authorise the Vercel GitHub app for that repo if asked).
3. Framework preset: **Next.js** (auto-detected). Root directory: `./`. Build command / output: leave defaults.
4. Before clicking Deploy, open **Environment Variables** and add the three required ones from A3. Then click **Deploy**.

A3. Required environment variables

Name	Value	Why
APP_PASSWORD	A strong password only you know	Login to the dashboard
AUTH_SECRET	64 random hex chars	Signs your session cookie (rotate it to log out every device)
CRON_SECRET	64 random hex chars (different)	Protects <code>/api/cron</code> ; Vercel Cron + GitHub Action send it

Generate random secrets (any one of these):

```
# Windows PowerShell
-join ((48..57)+(97..102) | Get-Random -Count 64 | % {[char]$_})
# Git Bash / Linux / macOS
openssl rand -hex 32
# or: https://generate-secret.vercel.app/32
```

A4. Storage — Redis (tracker & jobs) and Blob (CV)

1. Vercel → your project → **Storage** tab → **Create Database / Browse Marketplace** → choose **Upstash** → **Upstash for Redis** → plan **Free** → region closest to you (e.g. *ap-south-1 Mumbai*) → **Connect** to this project (all environments). This injects `KV_REST_API_URL` and `KV_REST_API_TOKEN` automatically.
2. Storage tab again → **Create** → **Blob** → set access to **Private** (important — public would expose your CV) → **Connect** to this project. Vercel adds the store ID / token automatically.
3. **Deployments** tab → on the latest deployment click **...** → **Redeploy** (env vars only apply to new deployments).

A5. First login & first refresh

1. Open `https://<your-project>.vercel.app` → you are redirected to **/login** → enter `APP_PASSWORD`.
2. Click **Refresh now**. First run takes 30–60 s. You should see a few thousand relevant jobs.
3. Open **Sources & APIs**: the top checklist must be all green except the optional alerts. Each source shows OK / partial / error with the exact error text.
4. If the yellow "memory mode" banner shows, Redis is not connected → repeat A4 step 1 and redeploy.

A6. Live automation with GitHub Actions (free): refresh every 30 min, agent every 3 h, hidden-jobs scan daily

1. GitHub → your repo → **Settings** → **Secrets and variables** → **Actions** → **New repository secret**.
2. Add `APP_URL` = `https://<your-project>.vercel.app` (no trailing slash).
3. Add `CRON_SECRET` = exactly the same value as on Vercel.
4. **Actions** tab → enable workflows if asked → open **refresh-jobs** → **Run workflow** to test. A green tick and JSON with `"ok": true` means it works. From now on it refreshes every 30 min, runs one AI-agent mission every 3 h and scans hidden jobs daily (the agent/scan continue on Vercel in the background, so they cost GitHub ~10 seconds each). GitHub may delay schedules by a few minutes under load. In the Run workflow box you can also type agent or discover to trigger those by hand.

Vercel Cron (in `vercel.json`) also runs once a day at 02:30 UTC as a backup — Hobby plans can't run cron more often. If you ever move to Vercel Pro you can change it to `*/15 * * * *` and drop the GitHub Action.

A7. Upload your CV

CV tab → choose your PDF/DOCX (max 4 MB) → optional extra skills → **Upload CV**. Skills are extracted automatically (Python, PyTorch, LangGraph, RAG, vLLM, QLoRA, Kubernetes, AUTOSAR, CAN, dSPACE...) and every job gets a CV-match % on the next refresh. To update your CV just upload the new file — older versions stay listed; you can switch the active one, download or delete any version. Files are in a private Blob store and are only streamed through `/api/cv/download` after the login check.

A8. Lock-down checklist

- Vercel account: 2FA on; don't add team members to this project.
- The whole app (pages + APIs) requires your password; only `/login`, `/api/health` (returns just "ok") and `/api/cron` (needs `CRON_SECRET`) are reachable without it. Pages send `noindex` so search engines skip them.
- Optional extra wall: Vercel → Project → Settings → **Deployment Protection**. On Hobby, "Standard Protection" covers preview URLs; production stays protected by your password.
- Never paste API keys into the code or the repo — only into Vercel → Settings → Environment Variables.

A9. Plug in a FREE AI provider (2 min) — or any model you like

1. Open `aistudio.google.com/apikey` → **Create API key** (Google account, no card).
2. App → **AI & Keys** tab → Provider: **Google Gemini** → paste the key → leave Model empty (auto-picks a Flash model) or click **Load models** → **Save provider** → **Test**.
3. Add a second free provider as backup: **Groq** (`console.groq.com/keys`) and/or **OpenRouter** (`openrouter.ai/keys`, pick a model ending in `:free`). Use ↑ ↓ to set the order — the first one answers, the next ones take over when it is rate-limited.

4. **Any third party:** choose “Any third party (OpenAI-compatible)” or “(Anthropic-compatible)”, type who provides it, its base URL (e.g. `https://api.provider.com/v1`), model and key. Claude: preset “Anthropic Claude”. OpenAI: preset “OpenAI”.

Keys typed in the app are AES-256-GCM encrypted with your AUTH_SECRET before they are stored, and are never sent back to the browser (only “...last4”). If you change AUTH_SECRET later, re-enter them. Prefer env vars? Set GEMINI_API_KEY / GROQ_API_KEY / OPENROUTER_API_KEY / ANTHROPIC_API_KEY / OPENAI_API_KEY or LLM_PROVIDER + LLM_BASE_URL + LLM_API_KEY + LLM_MODEL in Vercel instead.

A10. Give the AI agent a free web-search key (2 min)

1. Sign up at `app.tavily.com` (1,000 searches/month free, no card) → copy the API key.
2. App → **AI & Keys** → **API keys vault** → **Web search** → paste into TAVILY_API_KEY → Save. No redeploy needed.
3. Optional extra free quota (the agent rotates engines): Firecrawl, Exa, Linkup, Serper (see table B9). Unlimited: host SearXNG and paste its URL into SEARXNG_URL.
4. **AI Agent** tab → click **Run** on “LinkedIn hiring posts” — results appear under **Finds** with Apply / Save / Applied / AI-fit buttons.

PART B — Add API keys (optional, one at a time)

For every key, EITHER paste it in the app → **AI & Keys** → **API keys vault** (instant, encrypted, no redeploy) OR add it in Vercel → **Settings** → **Environment Variables** and **Redeploy**. Then app → **Sources & APIs** → **Run now** on that source → it should turn green. Quota-limited sources respect a cooldown (shown in the table) so the 30-min refresh never burns your free tier; override with `<ID>_INTERVAL_MIN`.

Priority / source	Covers	Free tier / price	Env var(s)	Default cadence
1. JSearch (RapidAPI)	LinkedIn, Indeed, Glassdoor, ZipRecruiter, Naukri & company sites via Google for Jobs	Free Basic plan (small monthly quota, hard-capped — no surprise bills). Paid plans if you want more.	RAPIDAPI_KEY	3 queries every 12 h ≈ 180/mo
2. SerpApi Google Jobs	Naukri, Foundit, Shine, iimjobs, Hirist, Cutshort, Instahyre, Wellfound, Glassdoor (shown as "via ...")	250 searches/month free, no card	SERPAPI_KEY	4 queries every 12 h ≈ 240/mo
3. Adzuna	Adzuna India index	Free developer key	ADZUNA_APP_ID, ADZUNA_APP_KEY	4 queries every 2 h
4. Jooble	Jooble India index (Naukri, Indeed, smaller boards)	Free key on request	JOOBLE_API_KEY	4 queries every 2 h
5. twitterapi.io	X hiring tweets (FDE / AI / India)	~\$0.15 per 1,000 tweets; free starter credits	TWITTERAPI_IO_KEY	2 queries every 2 h
6. X official API	Same as above, official	Pay-per-use credits (~\$0.005/post read). No free tier for new devs.	X_BEARER_TOKEN	2×10 tweets every 12 h ≈ \$3/mo
7. Apify LinkedIn scraper	Reliable LinkedIn jobs with full details	\$5 free credit/month; ~\$0.002 per job	APIFY_TOKEN	4 searches × 25 jobs every 12 h ≈ \$6/mo
The Muse (optional key)	Raises The Muse rate limit	Free	THEMUSE_API_KEY	every 2 h

B1. JSearch (RapidAPI) — best single key for LinkedIn/Indeed/Glassdoor

1. Open `rapidapi.com` → Sign up (Google login is fine).
2. Search **JSearch** (publisher: letsrape / OpenWeb Ninja) → **Pricing** → subscribe to **Basic (free)**.
3. Go to the **Endpoints** tab → copy X-RapidAPI-Key from the code snippet header.
4. Vercel env var `RAPIDAPI_KEY` = that key → Redeploy → Sources & APIs → JSearch → Run now.

B2. SerpApi — Google Jobs (Naukri, Foundit, Shine, iimjobs, Hirist, Cutshort, Wellfound...)

1. `serpapi.com` → Register (free plan, no card) → verify email & phone.
2. Dashboard → **Api Key** → copy.
3. Env var `SERPAPI_KEY` → Redeploy → Run now. Each job shows *via Naukri.com / via LinkedIn* etc. in the Source column.

B3. Adzuna

1. `developer.adzuna.com` → **Register** → confirm email → log in → **Dashboard / API Access Details**.
2. Copy **Application ID** → `ADZUNA_APP_ID` and **Application Key** → `ADZUNA_APP_KEY`. The app queries the India endpoint (`/jobs/in/search`).

B4. Jooble

1. jooble.org/api/about → fill the API access form (name, email, website: your Vercel URL, purpose: personal job alerts).
2. The key arrives by email (usually within a day) → JOOBLE_API_KEY.

B5. X / Twitter — pick ONE: twitterapi.io (cheap) or the official API

twitterapi.io: twitterapi.io → Sign in with Google → Dashboard → copy API key → TWITTERAPI_IO_KEY. Top up only when the starter credits run out.

Official X API: developer.x.com → sign in with your X account → Developer Console → create a Project + App → **Keys and tokens** → generate **Bearer Token** → buy pay-per-use credits (set a spending cap) → X_BEARER_TOKEN. Keep X_MAX_RESULTS=10 to control cost.

Search used: ("forward deployed" OR FDE) hiring and ("AI engineer" OR "ML engineer" OR "applied AI" OR "embedded AI") hiring (Bangalore OR Bengaluru OR India OR remote). Tweets appear as jobs with company = @handle.

B6. Apify LinkedIn (only if the free LinkedIn source shows rate-limit errors)

1. apify.com → Sign up (free plan includes \$5 monthly credit).
2. Console → **Settings** → **API & Integrations** → copy **Personal API token** → APIFY_TOKEN.
3. Optional: open the actor [curious_coder/linkedin-jobs-scraper](https://apify.com/actor/curious_coder/linkedin-jobs-scraper) once and click "Try for free" to accept its terms. The app starts a run every 12 h and reads the previous run's results instantly (no timeouts). Tune with APIFY_LINKEDIN_LIMIT (default 25 jobs per search).

B7. Telegram alerts to your phone (free)

1. In Telegram open **@BotFather** → /newbot → name it → copy the token → TELEGRAM_BOT_TOKEN.
2. Open your new bot and send it any message (e.g. "hi").
3. In a browser open <https://api.telegram.org/bot<TOKEN>/getUpdates> → find "chat":{"id": 123456789 → that number is TELEGRAM_CHAT_ID.
4. Redeploy → Settings tab → **Send test alert**. Alerts fire for new jobs with score ≥ the threshold you set (default 60 ≈ FDE in Bengaluru/India, or strong AI role posted < 24 h).
5. Optional: a Discord/Slack incoming-webhook URL in ALERT_WEBHOOK_URL sends the same alerts there.

B8. AI providers you can plug in (any mix, tried in order)

Provider	Free?	Where to get the key	Base URL (auto-filled)	Format
Google Gemini	Free tier on Flash models	aistudio.google.com/apikey	generativelanguage.googleapis.com/v1beta/openai	OpenAI
Groq	Free ~1,000 req/day/model	console.groq.com/keys	api.groq.com/openai/v1	OpenAI
OpenRouter (300+ models)	Free “:free” models (50/day; 1,000/day after \$10 top-up)	openrouter.ai/keys	openrouter.ai/api/v1	OpenAI
Cerebras	Trial credits	cloud.cerebras.ai	api.cerebras.ai/v1	OpenAI
Mistral	Free plan monthly credits	console.mistral.ai/api-keys	api.mistral.ai/v1	OpenAI
NVIDIA NIM	Free for testing (~40 req/min)	build.nvidia.com	integrate.api.nvidia.com/v1	OpenAI
Anthropic Claude	Paid	console.anthropic.com	api.anthropic.com	Anthropic

Provider	Free?	Where to get the key	Base URL (auto-filled)	Format
OpenAI	Paid	platform.openai.com/api-keys	api.openai.com/v1	OpenAI
DeepSeek / Together / xAI	Paid (cheap)	their consoles	auto-filled	OpenAI
Any third party / proxy / self-hosted	Whatever they give	their dashboard	type it	OpenAI or Anthropic

B9. Web-search engines for the AI agent (at least one)

Engine	Free tier	Get key	Vault / env name
Tavily	1,000 searches / month, no card	app.tavily.com	TAVILY_API_KEY
Firecrawl	Free monthly credits	firecrawl.dev/app/api-keys	FIRECRAWL_API_KEY
Exa	Free monthly credits	dashboard.exa.ai/api-keys	EXA_API_KEY
Linkup	Free monthly credits	app.linkup.so	LINKUP_API_KEY
Serper (Google)	2,500 free (one-time)	serper.dev/api-key	SERPER_API_KEY
Brave	\$5 monthly credit (card needed)	api-dashboard.search.brave.com	BRAVE_API_KEY
Jina	Free tokens; also speeds up page reading	jina.ai/api-dashboard	JINA_API_KEY
SerpApi (Google)	Shares the 250/mo with Google Jobs	serpapi.com	SERPAPI_KEY
SearXNG (self-hosted)	Unlimited	docs.searxng.org (Docker / free VPS)	SEARXNG_URL

Google's own Custom Search JSON API is being shut down (Jan 2027), so it is intentionally not used.

PART C — Reference

C1. Every job source the app calls (29) — plus the AI agent and hidden-jobs scanner on top

Source id	Key needed	Covers	Cadence
greenhouse	No	~60 company boards (Anthropic, Scale AI, Databricks, Glean, Tenstorrent, Lightmatter, Anduril, Waymo, Samsara, Netradyne, DevRev, Groww...)	every run
lever	No	Palantir, Shield AI, Zoox, Mindtickler, CRED, Meesho, Toptal, Eliyan, Field AI...	every run
ashby	No	OpenAI, Cohere, Snowflake, Sierra, Decagon, Harvey, Perplexity, ElevenLabs, Cursor, Cognition, Cerebras, Etched, d-Matrix, Sarvam AI, Applied Intuition, Skydio, Wayve, 1X...	every run
workable	No	Hugging Face	every run
smartrecruiters	No	Bosch, Continental, ServiceNow, Freshworks, Western Digital (5 keyword queries each)	every run
workday	No	NVIDIA, Intel, Micron, Marvell, Analog Devices, NXP, Samsung (SRI-B), Cadence, Broadcom, KLA, GlobalFoundries, Microchip, Salesforce, Adobe, HP	every run
amazon	No	amazon.jobs India (incl. AWS FDE / GenAI roles)	every run
microsoft	No	Microsoft careers India (IDC)	every run
linkedin	No	LinkedIn public jobs search, last 7 days, India + remote	every run
yc_jobs	No	Y Combinator / Work at a Startup	every run
instahyre	No	Instahyre (Bangalore + India)	every run
hn	No	Hacker News monthly Who's Hiring	hourly
reddit	No	r/MLjobs, r/DataScienceJobs, r/developersIndia, r/mlops, r/forhire	hourly
telegram	No	t.me/AiIndiaJobs + any channels you add	30 min
remotive	No	Remotive	6 h
remoteok	No	Remote OK	hourly
himalayas	No	Himalayas	every run
jobicy	No	Jobicy	2 h
themuse	No	The Muse (Bengaluru + remote)	2 h
workingnomads	No	Working Nomads	hourly
weworkremotely	No	We Work Remotely RSS	hourly
jobspresso	No	Jobspresso RSS	2 h
jsearch	RAPIDAPI_KEY	Google for Jobs: LinkedIn, Indeed, Glassdoor, Naukri...	12 h
serpapi	SERPAPI_KEY	Google Jobs: Naukri, Foundit, Shine, iimjobs, Hirist, Cutshort, Wellfound...	12 h
adzuna	ADZUNA_APP_ID + _KEY	Adzuna India	2 h
jooble	JOOBLE_API_KEY	Jooble India	2 h
apify_linkedin	APIFY_TOKEN	LinkedIn (reliable, paid per result)	12 h
x_official	X_BEARER_TOKEN	X hiring tweets (official)	12 h
twitterapi_io	TWITTERAPI_IO_KEY	X hiring tweets (cheap)	2 h

Add any other company from **Settings → Companies**: type the slug from its jobs URL (e.g. `jobs.lever.co/mistral`, `job-boards.greenhouse.io/groq`, `jobs.ashbyhq.com/sarvam`) → **Auto-detect ATS → Add**. Toggle any default company off with one click.

C2. How a job is classified & scored

What	Rule
Role (your rule)	Only FDE and AI/ML roles are kept. A firmware, RTL, sales or HR job is dropped even at an AI company; an AI/ML or FDE job is kept at ANY company.
FDE	forward deployed, FDE, deployment strategist, applied AI engineer/architect, AI deployment engineer, AI/ML/agent solutions · customer · field · implementation engineer/architect, founding AI engineer; or a JD that says "forward deployed"
AI/ML	machine learning, ML, AI, LLM, GenAI, deep learning, neural, MLOps, ML/AI platform, applied scientist, AI/ML research, NLP, computer vision, agentic, RAG, inference, perception, speech, recommendation, TinyML / edge AI, ML compiler — with an engineering/science job title
Domain (company industry)	Frontier AI lab · AI infra / devtools · Semiconductor / AI silicon · Embedded / Robotics / Automotive · IT / SaaS · Fintech · Healthcare · Defense · Consulting — from the company list tags or the JD wording. Filter by it in the Jobs tab.
Where	Bengaluru · India · USA · Remote (India-eligible = worldwide/APAC/India/IST, not "US only") · Remote (any) · Other onsite
Hidden gem	Found on a company board / HN / Telegram / YC / Instahyre (not LinkedIn or big aggregators) at a non-big-brand company → fewer applicants
Score	FDE +40 · AI/ML +20 · Bengaluru +20 / India +15 / Remote-India-OK +14 / other remote +6 · posted <24 h +15 / <3 d +10 / <7 d +5 · hidden gem +5 · CV match up to +30

Edit keywords, excluded title words (default: intern, account executive, recruiter...) and the alert threshold in **Settings**.

C3. Using the dashboard

Tab	What to do there
Jobs	Your personal portal. Filters: Role (FDE / AI-ML) · Where (Bengaluru / India / USA / Remote India-eligible / Remote any) · Domain (semiconductor, embedded, IT, fintech...) · level (junior / mid / senior) · source · posted window · hidden gems · salary shown · new since last visit. Every row: Apply (opens the real application link), AI (fit check vs your CV: score, gaps, how to pitch, cold DM, cover note) and Track.
AI Agent	Type what you want ("FDE roles at Bengaluru robotics startups funded this year") or run a mission: LinkedIn hiring posts · X hiring posts · hidden Bengaluru startups · remote-open-to-India · USA (visa) · AI roles in semiconductor/embedded/robotics · newly funded startups. The agent plans queries, searches the web, verifies every company career board it finds, reads career pages, filters with your AI provider and lists Finds (Apply / Watch / Save / Applied / AI). Missions also run automatically every ~3 h.
Hidden jobs & startups	Low-crowd companies: YC companies hiring in Bengaluru/India/remote/USA + freshly funded startups from ET Tech, Inc42, YourStory, TechCrunch, Crunchbase News. Each one is checked for a public careers board and open FDE/AI-ML roles, scored as a "hidden gem". Watch = its jobs flow into the Jobs tab on every refresh. Scans daily.
AI & Keys	Add / order / test AI providers (any model, any third party) and paste every API key into the encrypted vault — no redeploy.
Tracker	Kanban: Saved → Applied → Referral asked → Interview → Offer / Rejected / Ignored. Notes per job (referral name, interview date, CTC discussed). Export CSV. Entries survive even after the posting disappears.
Excel sheets	All 42 sheets of your workbook, every cell word-for-word (7,178 cells, 1,333 trackable rows). Each row: To do / Doing / Done / Skip + notes. Progress bar per sheet and overall, search across all sheets, filter "not done yet".
Platforms map	All 286 platforms from the Excel with how each one is tracked (below). "Open ↗" opens a pre-filled search with your keyword; "✓ checked" stamps the date so you know what is due ("due for a manual check > 3 days" filter).
Sources & APIs	Infra checklist + live health of all 29 sources (last run, fetched/relevant counts, exact error) and a Run now button per source.
CV	Upload/update CV, version history, view/download, switch active version, edit match skills.
Settings	Keywords, excluded words, alert score, Telegram channels, subreddits, sources on/off, ~180 companies on/off + add new companies.

C4. Updating the Excel later

Replace data/source_workbook.xlsx in the repo with the new version, run `pip install openpyxl` then `npm run excel`, commit and push — Vercel redeploys in ~1 minute. Row ticks are stored by "sheet:row number", so append new rows at the bottom of a sheet to keep existing ticks aligned.

C5. Troubleshooting

Symptom	Fix
Yellow "memory mode" banner	Redis not connected: Storage → Upstash for Redis → Connect to project → Redeploy.
"APP_PASSWORD env var is not set"	Add it in Settings → Environment Variables → Redeploy.
CV upload: "Vercel Blob is not connected"	Create a Blob store with access Private, connect it, Redeploy.
LinkedIn: "rate-limited this server IP (429/999)"	Normal on cloud IPs sometimes. Add RAPIDAPI_KEY (JSearch) and/or APIFY_TOKEN; keep LinkedIn on — it recovers on its own.
A source shows "Cooldown"	Working as designed to protect free quota. Use Run now (forces it) or set <ID>_INTERVAL_MIN.
A company in an ATS shows "partial failure"	That company moved ATS or renamed its slug. Settings → turn it off, then auto-detect the new slug.
GitHub Action fails with 401	CRON_SECRET in GitHub ≠ CRON_SECRET in Vercel, or APP_URL wrong / has a trailing slash.

Symptom	Fix
GitHub Action 409	A refresh was already running — harmless.
"A refresh is already running"	Wait ~1 min; the lock auto-expires after 2 min even if a run crashed.
No Telegram alerts	Send your bot a message first, recheck TELEGRAM_CHAT_ID, use Settings → Send test alert. First-ever refresh never alerts (avoids a flood).
Logged out everywhere wanted	Change AUTH_SECRET → Redeploy (then re-enter keys saved in the in-app vault).
AI Agent: "No web-search engine configured"	Add a free Tavily key in AI & Keys → API keys vault.
AI: "All AI providers failed → ... 429"	Free-tier limit hit. Add a second free provider (Groq / OpenRouter) below the first — the chain falls through automatically.
AI: "... 404 / model not found"	Click Load models in AI & Keys and pick one from the list (model names change).
Vault keys show "(no key — check AUTH_SECRET)"	AUTH_SECRET changed since you saved them — paste the keys again.
Hidden-jobs scan shows few roles	Untick "only with open FDE/AI roles"; many YC startups hire through the YC page (YC jobs ↗ button).

C6. Monthly cost options

Setup	What you get	Cost
A only	23 keyless sources, ~180 companies, LinkedIn guest, HN, Reddit, Telegram, YC, Instahyre, 30-min refresh, tracker, CV	\$0
A + JSearch + SerpApi + Adzuna + Jooble	+ Naukri/Foundit/Shine/iimjobs/Hirist/Cutshort/Wellfound/Indeed/Glassdoor via Google Jobs + 2 India aggregators	\$0 (free tiers)
+ twitterapi.io	+ X hiring tweets every 2 h	≈ \$1-3
+ Apify LinkedIn	+ bullet-proof LinkedIn with full JDs	≈ \$0-6 (after \$5 credit)
+ X official instead of twitterapi.io	Official X data	≈ \$3-10
+ AI (Gemini + Groq + OpenRouter free)	AI agent filtering, career-page reading, fit checks, cover notes	\$0 (rate-limited)
+ Agent web search (Tavily + Firecrawl + Exa + Linkup free)	≈ 3,000+ agent searches / month	\$0
+ Claude / OpenAI instead	Best quality analysis	≈ \$2-10 (pay per use)

Appendix — all 286 platforms from your Excel, mapped

LIVE API/feed: 29 · **LIVE company ATS:** 40 · **LIVE via aggregator:** 56 · **1-click search:** 82 · **Resource / checklist:** 76 · **Excluded:** 3

LIVE API/feed and **LIVE company ATS** = pulled automatically every refresh. **LIVE via aggregator** = no public API; postings arrive through SerpApi / JSearch (Google Jobs) or LinkedIn once those keys are added, and you can one-click search them. **1-click search** = no API and bot-protected; open from the Platforms tab and tick "checked". **Resource** = tools, certifications, newsletters, funding trackers, communities — tracked as a checklist (Excel sheets tab). **Excluded** = defunct (Hired, Papers with Code jobs, Honeybot).
